

JODOFORM powder (Iodoformium)

COMPOSITION

1g of powder contains: 99.5% tri-iodomethane

CHARACTERISTICS

Jodoform is a greenish-yellow, shiny, plate-crystal or crystalline powder, with intense and characteristic odour.

It is freely soluble in ether, partially soluble in chloroform, slightly soluble in concentrated ethanol and water.

The quality meets the requirements of USP 38.

Identification number: CAS N°: 75-47-8

METHOD OF USE

Jodoform in the form of powder is used in dentistry for the preparation of soft, absorptive paste, immediately before its use.

Mixing Jodoform powder with chlorphenol-camphor-menthol-based solution results in obtaining WALKHOFF paste, while mixing Jodoform with Solution Chlumsky solution results in obtaining a similar iodoform phenol-camphor paste.

NOTE

Jodoform powder is an irritant. It is harmful by inhalation, swallowing or by contact with skin. In the event of contact with eyes, or skin, rinse immediately with plenty of water and seek medical advice.

Hazard statements:

H 332: Harmful by inhalation.

H 312: Harmful in contact with skin.

H 302: Harmful if swallowed.

Precautionary notices:
